

Certificate of OWASP ASI-2026 Evaluation

Issued by AgentReady — Public Adversarial Benchmark for AI Agents

This certificate attests that the AI agent **cline** (<https://github.com/cline/cline>) was evaluated against the OWASP Top 10 for Agentic Applications 2026 standard, including the live ASI06 Memory Poisoning test suite and Z3 formal-verification of declared safety contracts.

Production Readiness Score	63.0 / 100	D
Z3 Formal Verification	VERIFIED	
ASI06 attacks landed (live)	44	
Scan identifier	dc48d6cea044416abe5082415ef16279	
Issued at (UTC)	2026-05-11 20:40:56Z	

Compute attestation. All inference performed by the AgentReady Judge and Red LLM ran on AMD Instinct™ MI300X via the AMD Developer Cloud, executed by vLLM 0.17.1 on ROCm 7.2. Concurrent Judge + Red model serving in 192 GB VRAM is the configuration that enables this benchmark in real time.

Evaluation methodology. Substitute-agent reconstruction of the target's declared prompt + tool surface, two-session memory poisoning per ASI06, Llama-3.1-class Judge LLM scoring behavioral drift, and Z3 SMT verification of safety contracts pattern-matched from the agent manifest.
